Dear Ms. Cihak,

The following information is provided at your request:

Two (2) soil samples were collected, one under each end of the tank, at a depth of 115" below surface. Each sample was collected with a stainless steel spoon that had been decontaminated prior to use. Soil was placed in eight ounce jars provided by Burlington Research, sealed, placed on ice, and delivered to Burlington Research Company.

I hope you have found the above information satisfactory to complete the subject tank closure. If you need additional information, please let me know.

Respectfully submitted,

David Johnson, Special Representative
